

Task 4 — Flask Task Manager Web Application

Objective

To build a simple web application using Flask that demonstrates backend fundamentals such as routing, templates, form handling, and CRUD operations.

Technologies Used

- Python
 - Flask
 - HTML
 - CSS
 - Bootstrap
 - GitHub
 - Render
-

Features

- Add tasks
 - Display tasks
 - Delete tasks
 - File-based task storage
 - Responsive Bootstrap UI
-

Project Structure

```
task-manager-flask/  
├── app.py  
├── requirements.txt  
├── Procfile  
├── tasks.txt  
├── templates/  
│   └── index.html  
├── static/  
└── style.css
```

Important Code Snippet

```
@app.route("/", methods=["GET", "POST"])
def index():
    if request.method == "POST":
        task = request.form.get("task")

        if task:
            save_task(task)

        return redirect("/")

    tasks = load_tasks()

    return render_template("index.html", tasks=tasks)
```

Conclusion

This project helped me understand Flask routing, template rendering, form handling, CRUD operations, and deployment using Render.
